MAP NO. 3111 UNITED NATIONS
AUGUST 1980

"The boundaries and names on this map do not imply official endorsement or acceptance by the United Nations."

FOREWORD

The Development Co-operation Report (DCR) is an annual publication compiled by the United Nations Development Programme (UNDP). The DCR provides information on aid flows under Official Development Assistance (ODA), including emergency and relief support. The DCR presents an overview of capital and technical assistance programmes and thus, it can serve as a useful tool for coordination and co-operation among donors and government agencies and as an information base to enhance external and national linkages.

As in the previous year, the 1991 DCR was prepared using the computerized Development Co-operation Analysis System (DCAS) developed by UNDP Headquarters. This system is designed to ensure universality and comparability of all UNDP country DCRs. Compiled by the UNDP office in Manila, it is based on information provided by the various donor agencies. In 1991, total inflows of external assistance to the Philippines amounted to US$1.4 billion of which US$1.09 billion were in the form of loans and US$0.31 billion were grants. External assistance was principally channelled to investment-project assistance and balance of payments support. In 1991, the top five donors were Japan, the World Bank, the Asian Development Bank (AsDB), the United States of America (USA) and Germany.

The office of the UNDP in Manila would like to express its appreciation for the assistance of all multilateral and bilateral agencies and non-government organizations for their valuable co-operation in supplying the information which has formed the substance of this Report.

KMcGrath

Kevin McGrath
Resident Coordinator of the
United Nations System's Operational
Activities for Development

Manila, Philippines
July, 1993

DEFINITION OF TERMS

Amortization Period - Period from date of commitment to date of last payment.

Approval - An approval is a firm obligation supported by the appropriation or availability of public funds. Approvals are considered to be made on the date the loan or grant agreement is signed.

Beneficiary institution - The institution receiving the benefit assistance of the development activity.

Co-financing - Modality of co-operation by which financing of projects and programmes is provided from more than one source, other than the recipient Government. Co-financing arrangements may consist of third-party cost-sharing or a trust-fund modality.

Commitment - A commitment is a firm obligation expressed in an agreement or equivalent contract and supported by the availability of public funds, undertaken by the donor, to furnish assistance of a specified amount under agreed financial terms and conditions and for specific purposes, for the benefit of the recipient country.

Disbursements - Disbursement represent the actual international transfer of financial resources.

Donor - The origin of funds for development assistance (multilateral, bilateral and non-governmental organizations).

Executing Institution - The executing institution is the institution actually executing the programme or project, from its inception to its completion. The executing institution can be the donor itself, the recipient Government, or intermediary institution executing the project on behalf of the donor.

External assistance - External assistance consists of Official Development Assistance (ODA), including emergency relief assistance and external non-governmental organization assistance.

Grant - A grant is the same as the provision of funds by a donor that does not require reimbursement from the recipient Government.

Loan - The provision of resources, excluding food or other bulk commodities, for relief or development purposes, including import procurement programmes, which must be repaid according to conditions established at the time of the loan agreement or as subsequently agreed.

Loan, concessional - Funds provided by a donor as a loan which consist of a minimum 25 percent grant element, thus qualifying the loan as an ODA transaction.

Loan, non-concessional - Any other funds being provided by the donor that must be reimbursed over a period of time under terms which do not make it eligible as ODA. Data on these loans are not included in the DCR.

Official Development Assistance (ODA) - Official Development Assistance is defined as those flows to developing countries from bilateral sources and multilateral institutions provided by official agencies, including state and local government, or by their executive agencies, each transaction of which meets the following tests:

a. ODA is administered with the promotion of the economic development and welfare of developing countries as its main objective;

b. ODA is concessional in character and conveys a grant element of at least 25 percent.

Personnel - The personnel financed by the donor of the external assistance activity for which information is being collected.

Reporting year - The reporting year corresponds to the year for which the information is collected.

Responsible ministry or department - is the entity in the recipient country's government responsible for implementating of the project.

Revolving fund - A revolving fund financed by external assistance provides loans for development purposes to individuals or institutions in the recipient country.

Sector - the substantive sector in which the project or activity has been classified using a standard classification system.

Target beneficiaries - Target beneficiaries are those individuals or groups who are intended to benefit from the outputs of the project.

Theme - Development assistance activities often have specific foci and DCR projects may be classified as addressing a specific topic. The eleven special foci are:

Women Assistance specifically aimed at enhancing the role of females as beneficiaries and/or participants in the development process as a whole or within a specific sector or subsector.

Private Sector Assistance specially aimed at enhancing the role of private business enterprise in development.

Non-Governmental Organizations Assistance specifically aimed at strengthening GOs grass-roots organizations or those which use the services or know-how of international or local NGOs.

Acquired Immunodeficiency Syndrome (AIDS) Assistance aimed at preventing or reducing the incidence of or AIDS-related illness through health and other community programmes or by providing education programmes designed to promote practices which may help prevent the spread of the Human Immunodeficiency Virus (HIV).

Technical Co-operation among Developing Countries (TCDC) Assistance specifically aimed at increasing or enhancing technical co-operation among developing countries or which is specifically designed to transfer technology from one developing country to another.

Management Development Assistance specifically aimed at developing management capacity and management institutions in the public and private sectors.

Drug Abuse Assistance specifically aimed at reducing the production, use of and traffic in drugs, other than for medicinal purposes.

Environment Assistance specifically aimed at preventing environmental damage and/or at countering past environmental degradation.

Aid-coordination Assistance specifically aimed at promoting and facilitating the co-ordination of external assistance as a whole or within particular sectors or subsectors.

Poverty Eradication Assistance specifically aimed at satisfying the basic human needs of disadvantaged groups through participatory approaches thus enabling them to create income-earning opportunities and to organize services.

Training - Resources allocated by the donor within a project for the training of recipient country nationals inside or outside the recipient country.

Types of assistance:

Free-standing technical co-operation (FTC) The provision of resources aimed at the transfer of technical and managerial skills and know-how or of technology for the purpose of building up national capacity to undertake development activities, without reference to the implementation of any specific investment project(s).

Investment-related technical co-operation (ITC) The provision of resources, as a separately identifiable activity, directly aimed at strengthening the capacity to execute specific investment projects.

Investment project assistance (IPA) The provision of financing, in cash or in kind, for specific capital investment projects, i.e., projects that create productive capital which can generate new goods or services.

Programme/Budgetary Aid or Balance of Payments Support (PBB) The provision of assistance which is not cash in terms of specific investment or technical co-operation projects but which is instead provided in the context of a broader development programme and macroeconomic objectives and/or which is provided for the specific purpose of supporting the recipient's balance-of-payments position and making available foreign exchange.

Food Aid (FOA) The provision of food for human consumption for development purposes, including grants and loans for the purchase of food.

Emergency and Relief Assistance (ERA) The provision of resources aimed at immediately relieving distress and improving the well-being of populations affected by natural or human-made disasters. Food aid for humanitarian and emergency purposes is included in this category.

EXPLANATION OF THE COLUMNS IN THE INVENTORY OF EXTERNALLY ASSISTED PROJECTS

Project Title

This is usually an abbreviation of the official title of the project as submitted by the donor.

Project Number

The unique number assigned to the project by the DCR computer software (DCAS), not the donor's or government's number for the project. The number consists of the following elements:

PHI/ /	Recipient country, Republic of the Philippines
/ECO/	Abbreviation of the sector to which the donation is targeted.
/ /0001	Numerical (DCAS) code to identify the project.

Donor Number

The number assigned to the project by the donor, when available.

Source of Assistance

The donor country or donor organization. When more than one donor has contributed to a project, both donors are listed.

Duration of project

The start and end dates of project activities. If no start or end dates were provided by the donor, the dates 1/1/91 and 1/12/91 were assigned.

Total commitment to project

The total amount of funding to the project by the donor over all project activity years. When donors supplied figures in currencies other than US dollars, they were converted into US dollars using the weighted average of the United Nation's official monthly exchange rates.

1991 expenditures

The amount of project funds actually spent (disbursed) during 1991. As accounting periods and reporting methods differ between donors, efforts were made to adjust the data supplied to the calendar year, to enable comparison.

Type and Terms of assistance

Technical assistance is classified into two types: FTC - Free Standing Technical Cooperation, and ITC - Investment-Related Technical Cooperation. There are three types of capital assistance: IPA - Investment Project Assistance, PBB - Program Budgetary Aid or Balance of Payments Support and ERA - Emergency and Relief Assistance.

The two terms listed are grant and loan.

Target area(s) of project

The province(s) in which the target beneficiaries of the project activities reside. Projects targeted at more than one province have several entries under this column. Projects with activities across the country will have "country-wide" listed in this column.

Brief description of project

The main objectives of the project.

PART ONE: COUNTRY BACKGROUND

PART ONE: COUNTRY BACKGROUND

A. SETTING

1. Physical Features and Natural Resources

The Republic of the Philippines is an archipelago of 7,098 islands located southeast of the Asian mainland, bounded on the west and north by the South China Sea, on the south by the Celebes Sea and on the east by the Pacific Ocean. The total sea area within the territorial waters is 1,123 million square kilometers with a consolidated coastline of 13,411 kilometers. Eleven large islands take up approximately 95 percent of the land area of 299,404 square kilometers. Of these, Luzon (104,688 square kilometers) and Mindanao (94,630 square kilometers) are the two largest, together making up 65 percent of the total land mass.

The country lies within the seismic belt called the "Ring of Fire" which stretches along the Pacific coasts of Asia and the Americas. It has approximately 200 volcanos, eighteen of which are active. Its topography is generally mountainous but also includes fertile coastal and central plains and rolling uplands. The climate is tropical and its monsoon season is lengthy--from June until November.

The Philippines has abundant natural resources and sizeable mineral deposits. Gold, copper, zinc, high-grade chrome, nickel, iron ore, coal, marble, limestone, shale clay and gypsum are all exploited in more than 75 percent of the country's 73 provinces. Indeed, the total value of economic mineral production was estimated at 23.2 billion pesos in 1991 and total metallic and non-metallic reserves were estimated at 6.36 and 25.29 billion metric tonnes, respectively. Indigenous oil and gas, coal, hydro, geothermal and non-conventional energy sources (such as biomass and solar) are also tapped. In total, these resources account for 35 percent of the nation's energy consumption.

From 1972 until 1990 forest cover decreased by 41 percent. During that time 115.83 million cubic meters of logs were harvested. The remaining 6.16 million hectares of forest cover (20.53 percent of the total land area) boast a wide range of commercial tree species suitable for timber, plywood, furniture and veneer production.

Agricultural lands--estimated at 9.7 million hectares--grow rice, corn, palay, coconut, sugarcane, banana, coffee, mango and pineapple as well as other tropical fruits and vegetables. The surrounding seas also yield their own harvest. However, these abundant aquatic and marine resources are threatened by over-exploitation and pollution--particularly the coral reefs which constitute 2.7 million hectares of territorial waters.

2. Demographic and Social Characteristics

In 1990 the population of the Philippines was estimated to be 61.5 million. Using a projected growth rate of 2.3 percent, it grew to an estimated level of 62.9 million in 1991. The 1990 rural population was 57.3 percent, while urban dwellers made up an estimated 42.7 percent of the total population. Approximately 12 percent of all Filipinos live in ten major cities, including Manila, the capital, whose estimated population of eight million increases at a rate of three percent per year.

In the country's 13 regions, including the National Capital Region, population density ranges from a low of 64 and 94 in the (CAR) and Cagayan regions, to 12,859 per square kilometer in Metropolitan Manila. The average population density is 210 persons per square kilometer.

Although Tagalog, Ilocano and Cebuano are the most prevalent, more than 80 different languages and dialects are spoken in the Philippines. Over 73 different indigenous and minority groups totalling six million people live in eleven of the twelve regions.

The UNDP *Human Development Report 1991* ranked the Philippines 80th among 160 countries in terms of the human development index. The country has achieved an average life expectancy of 64.2 years and an adult literacy rate of 90 percent. In health, indicators such as immunisation (82 percent), access to safe water (86 percent) and sanitation (91 percent) are impressive. But access to health services is still limited--especially in rural areas--and inadequate housing continues to be a major problem in urban areas, straining already severely inadequate urban infrastructure and services. Notwithstanding these last limitations, however, the absence of male-female disparities in life expectancy and education are encouraging indicators.

3. Political and Administrative Organization.

The present Constitution of the Republic of the Philippines was adopted in 1987 following the EDSA Revolution and the election of President Corazon Aquino. It provides for the separation of legislative, executive and judicial powers and subdivides the country into provinces, cities, municipalities and barangays. Furthermore, the Constitution gives Muslim Mindanao and the Cordilleras status as autonomous regions.

The President is the head of state and directs the main executive body, the Cabinet, whose members comprise the secretaries of the line agencies. Congress, which consists of a Senate of 24 members and a House of Representatives with 200 members, is the central legislative body.

The local government is organized into 73 provinces, 2 sub-provinces, 60 chartered cities, 1,535 municipalities, and approximately 42,000 barangays. With the passage of the Local Government Code, which became effective on January 1, 1992, greater autonomy has been extended to these political and territorial sub-divisions, primarily through expanded revenue collection measures.

Trends in Human Development

	Year	Philippines (Rank among 160 countries)	ASEAN Average (Excluding Brunei)
Life Expectancy at Birth (years)	1960	53	53
	1990	64	67

B: ECONOMIC PERFORMANCE

1. Development Scenario

Over the last six years the performance of the Philippine economy was marked by a series of boom-and-bust episodes. Initially, following the 1984 and 1985 recession, general optimism brought about by the 1986 EDSA Revolution seemed to have provided the impetus for economic growth. Real GNP grew by 4.2 percent in 1986 and reached a peak of 7.2 percent in 1988. This impressive growth in output, however, was generally consumption- and import-led and could not be sustained because of structural imbalances.

These imbalances have been traced to several factors: structural weaknesses in the industrial and trade sectors; a high debt service that led to negative net resource transfers to the economy; weak export performance; the inability of local industries to compete in world markets; and inadequate foreign investment flows. At the same time, a rapid population growth rate of 2.3 percent eroded any gains in real output.

The economy was further strained by several coup attempts, the Gulf War and numerous natural calamities which caused real GNP growth to decline to 1.6 percent in the fourth quarter of 1990. In response, during the second half of 1990, a stabilization programme to reduce inflationary pressure and narrow the fiscal and trade deficits was instituted.

The economy's basic structural deficiency is its inefficient, highly-protected and capital-intensive manufacturing sector. Despite significant reforms instituted since 1986, inconsistencies and delays in implementation have led to a generally negative perception of economic prospects, both at home and abroad. The economy has remained dualistic: the manufacturing sector contributes one fourth of the GDP but employs only 10 percent of the labour force. Agriculture, on the other hand, contributes about the same to the GDP, but employs half of the labour force.

The rapidly growing labour population has not been absorbed into high-paying industrial jobs, but into low-productivity jobs in the agriculture and services sectors. This pattern contributes to widespread poverty, which affects about half of the population. Overall, unemployment and underemployment remain high, close to 10% and 30% in 1991.

DEVELOPMENT POTENTIAL

* Rich natural resources with large potential for development of indigenous energy resources, marine production, high yield variety crops and mineral resources.

* With no male/female discrepancy, one of the highest literacy rates in developing countries and the highest English literacy rate in Asia. A highly-skilled and educated labour force.

* Restoration of democracy and the peaceful transition of power to a new administration in 1992 have stabilised the political climate and raised foreign and local business confidence.

* Economic reforms have been initiated related to investment climate liberalisation, export promotion, deregulation and the privatisation of government corporations.

* Geographically, the country is strategically located with close proximity to large external markets, which makes it a potential attraction for foreign investment.

DEVELOPMENT CONSTRAINTS

- Geological and climatic factors create high risks for natural disasters such as flooding, earthquakes and volcanic eruptions.

- Mobilisation of domestic resources from tax revenue collection and domestic savings for investments remain low.

- Lack of investment in infrastructure and energy has created critical bottlenecks and shortages, discouraging new investment activities and lowering potential growth, with chronic problems in electrical power generation.

- Protectionist policies for industry and agriculture have led to low levels of investment in technology.

- Low productivity in agriculture and industry has lowered export growth and income growth.

- The high population growth rate and insufficient management of natural resources have resulted in over-exploitation and degradation of the environment. Pollution control measures are not adequately enforced.

- Income disparities are high. Twenty percent of the population earns fifty percent of the total income. There is widespread poverty particularly in rural and densely populated urban areas.

2. Macroeconomic and Sectoral Performance, 1991

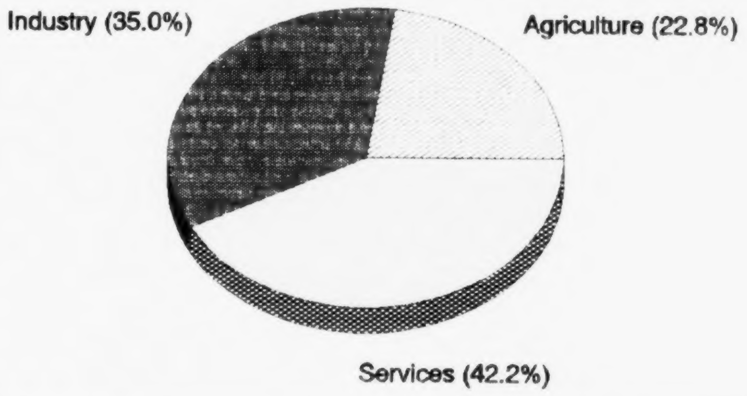
Overall Growth

During 1991, GDP growth continued to decline, showing a negative growth rate of 1.2 percent compared with 1990's positive rate of 2.4 percent. The year was marked by serious internal and external difficulties. On the domestic front, the economy faced macroeconomic imbalances characterized by a huge budget gap, a large current account deficit, double-digit inflation and high interest rates. A stabilization programme necessitated stringent fiscal and monetary measures which had contractionary effects on aggregate demand. This was aggravated by a string of natural calamities, notably the Mt. Pinatubo eruption. On the external front, the Gulf War's impact on the entire the entire global economy affected the Philippine economy as well.

Weak aggregate demand resulted in a 14 percent contraction in gross investments arising from slowdowns in construction activities, postponed durable equipment purchases (which were made more expensive by the import levy) and low business expectations. Private consumption expenditures weakened due to the deterioration of consumer purchasing power. Further, both the delay in the approval of the national government budget and prudence in public spending contributed to reduced government consumption expenditures. However, exports performed favorably in 1991 with 4.6 percent growth compared to 1990's 1.2 percent.

In light of the economic slowdown, the labour sector failed to absorb the increasing number of new entrants into the labour force. Unemployment was placed at 10.5 percent in 1991 compared to 1990's 9.4 percent and underemployment was registered at 31.9 percent for the year.

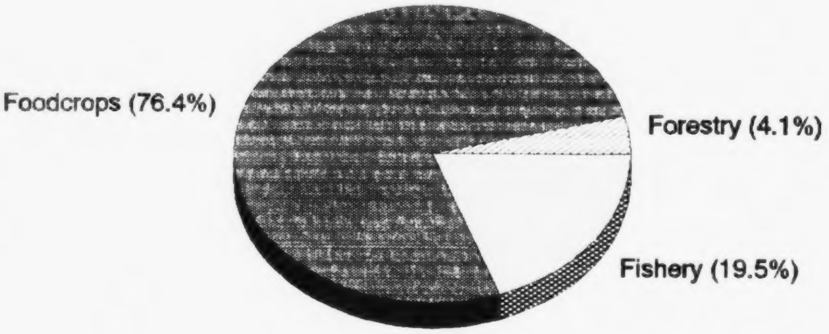
Figure 1.3
GDP Composition by Sector, 1991



Sectoral Performance

In 1991 **Agriculture** showed the best sectoral performance with registered growth of 1.2 percent in gross value added and total output increasing by 0.7 percent. Despite this, performance fell short of the planned target by 2.1 percent. The shortfall is explained by the effect of natural disasters (the eruption of Mt.Pinatubo, floods and prolonged drought), an increase in import costs of agricultural inputs, a receding world market for a number of Filipino products, and the tightening of agricultural credit during the second half of the year for monetary policy reasons. There were also positive developments: a buoyant world market for sugar and bananas, a rise in palay harvest (due to the increased use of high yielding seed varieties an expanded area under cultivation), and a rising domestic demand for poultry and other less capital-intensive food products.

Figure 1.4
Agriculture Composition, 1991



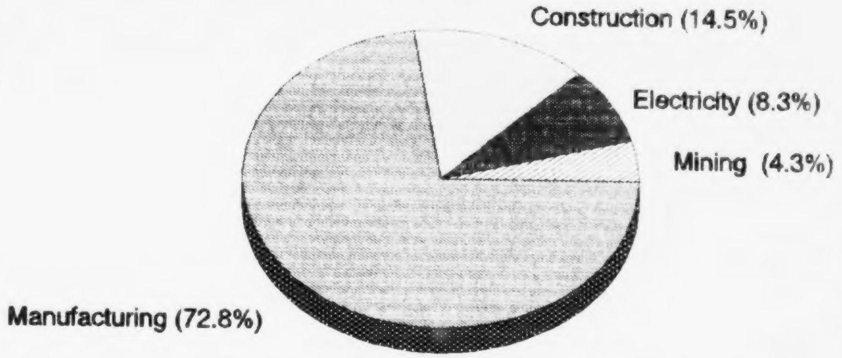
Low agricultural productivity (approximately one-fifth of the manufacturing sector) had an impact on rural household income. Indeed, three out of five households with incomes below the poverty line are in rural areas and 75 percent of the wage earners in the bottom 30 percent earn their living from agriculture. The sector's contribution to GDP was 21.1 percent in 1991.

Industrial output declined by 3.3 percent in real terms in 1991 when compared to output in 1990--from P256.1 billion to P247.7 billion--due largely to the recession. The sector's share of the GNP also declined from 35.7 percent (in 1990) to 34.3 percent (in 1991), adversely affecting largely the petroleum and coal product, textile, transport equipment and metal industries.

Further, investment in industry slowed down by 23 percent. Factors contributing to this were high interest and inflation rates and increased production costs, partly owing to an import levy introduced as an emergency measure. This slowdown added to the generally uncertain economic climate following the Gulf War. In addition, the unsure future of the United States bases at Clark and Subic contributed to an unfavourable business climate.

Indeed, even though the **Services Sector** still accounted for the highest share (45 percent) of the economy's total output, growth in this sector still declined from four percent (4 percent) to almost zero. Trade and finance registered modest growth, while those of the transportation and communication sectors declined. Private and Government services showed essentially no growth, due largely to the slowdown in investments and curtailed Government services.

Figure 1.5
Industry Composition, 1991



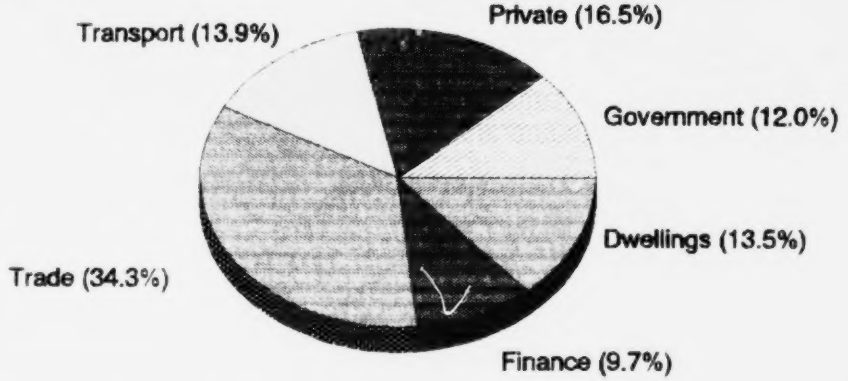
In the **Education** sector the Government officially adopted the *Education for All* programme in December 1991 laying out a National Plan of Action which includes 76 validated national and region-based projects. The total student population in the country, based on 1991-92 school year enrolment figures, was 16.8 million, up by 4 percent from the previous year's level. Cohort survival rates suggest that only 69.7 percent of all elementary school pupils who enrolled six years ago reached the Grade VI level. The remaining 30.3 percent either dropped out or had no access to intermediate level schooling.

Improvements were recorded in the **Health** sector during the year. Estimates showed that the Crude Death Rate (CDR) declined to 7/1000 and the infant mortality rate dropped to 49/1000. A number of disease-control and awareness-building programmes (tuberculosis, diarrhoea, malaria, schistosomiasis, acute respiratory infections and maternal and child health care) were continued.

Fourteen percent of all pre-school children are estimated to be underweight while almost 16 percent of seven-to ten-year olds are estimated to have below-average heights for their age. Programme implementation in the **nutrition** sector focused on nutritionally-at-risk areas and population groups as well as calamity-stricken areas.

In **Population and Family Planning**, the year was marked by intensified efforts to integrate population concerns into the development programmes and projects of various agencies participating in the Philippine Population Programme. Under the Family Planning Programme, key indicators revealed 774,000 new acceptors, bringing the total numbers of users of family planning services to 1.6 million.

Figure 1.6
Services Composition, 1991



In the **Housing** sector, the National Shelter Programme reported total housing assistance of 113,198 units in 1991, or 11.8 percent more units than in 1990. In terms of financial assistance this translates to ₱12.2 billion or (46.5 percent) more in 1991 than in the previous year.

Social welfare programmes focused on mitigating the impact of national and local government budget cuts on the disadvantaged and marginalised segments of the population. Major efforts were also directed towards improving the local level delivery system through building field implementation capacity and awareness among local officials. In general, however, ongoing programmes were severely affected by the need to redirect assistance to relief and rehabilitation from natural disasters and human-made crises such as civil disturbances.

The Government's **Infrastructure** programme amounted to P57.82 billion, a figure 25.6 percent higher than originally targeted. Affected by the late approval of the national budget, disbursements only totalled P39.33 billion (85.4 percent of the target). All sub-sectors, except energy, experienced severe setbacks due to the reallocation of resources for calamity stricken areas--especially the areas hit by the earthquake in mid-1990.

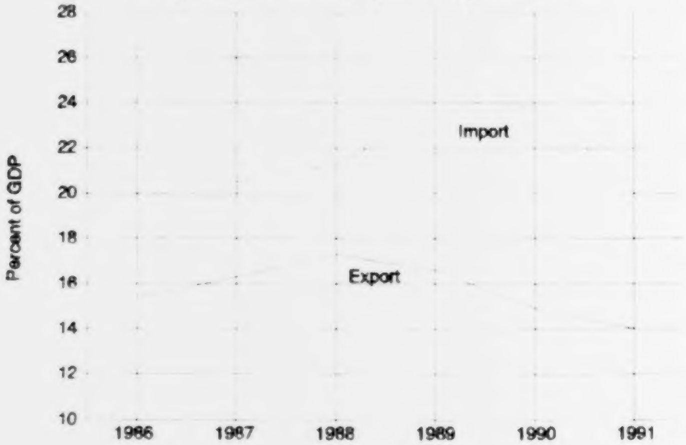
Transport accounted for 40 percent of total government spending on infrastructure, the highest in monetary terms. Road rehabilitation, especially for earthquake-hit areas, and the improvement of port structures represented the main investments.

Approximately 32 percent of the infrastructure budget was spent in the **Energy Sector** for upgrading and maintaining existing power generation facilities and, to some extent, for transmission projects. The installation of additional water supply lines and irrigation and flood control facilities accounted for 18.9 percent while, in the social sector, the improvement of school and urban community facilities received 6.5 percent.

The External Sector

When the Aquino Administration took office in 1986, it inherited a heavy external debt of US$ 26.3 billion. Since then, the Government has pursued a debt management strategy aimed at reducing the overall debt by: (a) concluding financing packages with commercial bank creditors in 1987, 1989 and 1991; and (b) signing four restructuring agreements with the Paris Club during this period.

Figure 1.7
Significance of Foreign Trade, 1986-1991

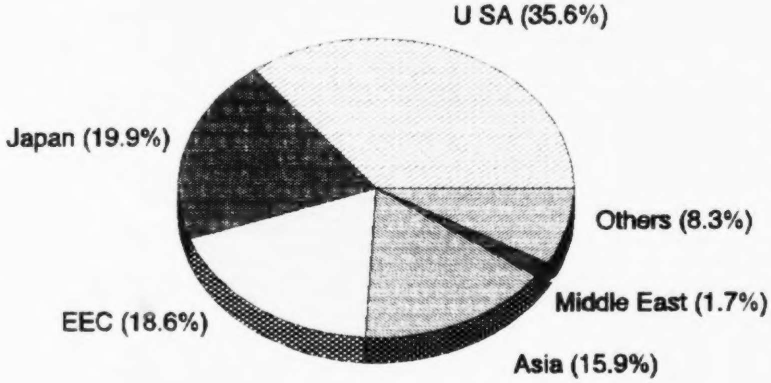


As a result, the ratio of debt to exports declined from 35.8 percent (in 1986) to 20.7 percent (in 1991). Similarly, the ratio of debt to GNP dropped from 10.6 percent to 6.6 percent during the same period.

The balance-of-payments position generally worsened during the period 1986 to 1990, with the overall surplus declining since 1986 and reversing into a deficit in 1990 of US$ 188 million. However, 1991 witnessed a surplus of US$ 1,405 million. The improved BOP situation was a result of increased exports, a rise in non-merchandise trade and shrinking imports--as a consequence of depressed industrial and business activities during the year. Also, increased remittances from overseas workers, together with reduced service payments on the debt further contributed to a positive balance-of-payments situation at the end of the year.

The United States, Japan and the EEC remained the country's top three trading partners. They were followed by other Asia-Pacific countries including the Republic of Korea and Hong Kong. During the year imports exceeded exports by US$ 3.2 billion even though the volume of imports had declined by 1.3 percent against an export-growth level of 8.0 percent.

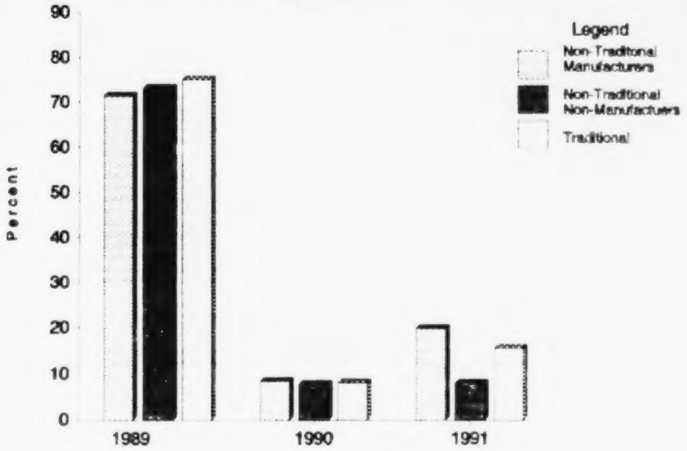
Figure 1.8
Export Direction, 1991



The growth in exports came from a higher demand for more traditional Philippine items (such as bananas, pineapple juice and concentrates, desiccated coconut, sugar, lumber and plywood) as well as for less traditional ones (such as toys, sporting goods and footwear). Non-metallic mineral manufactured goods, machinery and transport equipment, semiconductors and electronic microcircuits were also exported. Garment, electronic and electrical equipment exports, however, experienced lower growth rates as a response to quota systems and competition from rapidly evolving technological developments. Nevertheless, both sub-sectors remained among the top export earners with a 21.1 and a 25.9 percent share of total earnings.

On the other hand, a number of capital goods imports practically ceased (such as land transport equipment, specialised machinery, ships, aircraft and power generators). In general, imports were also discouraged by the economic slow-down and the import levy which was introduced at nine (9) percent at the beginning of the year and which was later reduced to five (5) percent.

Figure 1.9
Composition of Exports by Product Type
1989-1991



Fiscal Adjustment, Inflation and Monetary Measures

In 1991, the overriding concern of the Government's macroeconomic managers focused on an economic stabilisation programme aimed at (a) preventing the inflation rate from rising; (b) improving the external current account position; and (c) keeping the public-sector deficit at a more manageable level. To meet these goals, several contractionary monetary, fiscal and foreign-exchange measures were adopted.

An across-the-board, nine (9) percent import levy was imposed pending Congressional approval of revenue and tax enhancement measures. Tax revenue collection, which had been targeted as an area for improvement, increased by 22.1 percent, mainly as a result of increased revenue collection on net income and profits. Several revenue areas nevertheless fell short of target. Then, further accomplishment of programmed revenues was handicapped when Congress did not pass the tax enhancement measures.

As a result of cost-saving/austerity measures, Government spending was reduced from 20.3 percent of the GNP (in 1990) to 19.7 (in 1991) while revenues increased from 16.8 percent of GNP to 17.6. This resulted in reducing the public deficit from 3.5 percent of the GNP (in 1990) to 2.1 percent (in 1991).

Despite measures to decrease the money supply by floating Government securities, the supply increased by 16 percent as compared to a 13 percent rise of the previous year. In response, the bank's reserve requirement and aggregate demand was kept at 25 percent and open market operations were pursued. Then, partly because of monetary aggregate growth, inflation rose to 18.7 percent in 1991--up from 14.2 percent in 1990. Other factors contributing to inflation were the sharp rise in oil prices and the effects of the substantial peso depreciation in 1990. In the latter half of the year inflationary pressure seems to have lessened somewhat.

3. Economic Policy Reforms

In 1991, several economic reforms were initiated to support the economic reform agenda initiated in 1986 whose two-fold purpose was to achieve economic recovery and maintain growth through (a) the revitalisation of private enterprise; and (b) the improved management of public resources.

External-sector investment liberalisation was supported. The Foreign Investment Act was passed. (The Act increases the maximum allowable foreign equity participation (except for a limited number of national security industries) and establishes a more simplified set of procedures for repatriation of investments and profits.) To complement this, the Board of Investments was reorganized: it is now more promotional than regulatory. In addition, more liberal foreign exchange regulations were initiated by the Central Bank to allow for wider individual and corporate foreign exchange deposits, as well as for the free transfer of liquidated foreign investments. The tariff structure was also further rationalized and simplified through Executive Order (EO) 470.

In the financial sector, structural initiatives have opened up to more competition and have extended credit systems to secondary cities and rural areas. The capital base of commercial banks was also widened to ensure maturity and greater capability to render financial services. And, among banks, mergers and consolidations were given further incentives.

Public-sector reform policy has centered on three areas: tax reform, privatisation, and reform in the National Government's corporate organisations and financial institutions. The overriding objectives were to: (a) improve the fiscal position of the national government; (b) reduce public-sector intervention in the economy; and (c) improve the administrative and institutional capacity for public investments and thereby facilitate project implementation.

In addition to the tax reform programmes launched in 1986 and 1990 aimed at making the tax system more equitable and progressive, RA 7167 was signed to increase the personal tax exemption of taxpayers. Further, the tax base was adjusted to the current poverty threshold level.

As of December 1991, a total of 85 government-owned and/or controlled corporations had been offered for sale. Seventy of these had been either fully or partially sold or were in the process of dissolution. Gross revenues from the privatisation programme at this point totalled ₱43 billion. The privatization policy has been implemented to limit government corporate involvement to areas where private-sector enterprises are not feasible, or where government interventions can benefit otherwise disadvantaged sectors of society. Management reforms have similarly been initiated in these corporations to increase public accountability and financial performance.

4. Short- and Medium-Term Prospects

With the initiation of economic reform and the smooth transfer of power to a new administration in 1992, the country seems poised for economic growth over the medium term. The task ahead is to build on the relative stabilization of the economy through further policy and structural reforms and to create stronger business and investor confidence.

The priority is to create a macroeconomic policy climate which will contribute to private-sector-led, export-oriented growth. Consistent macroeconomic reform will also help generate the domestic and foreign investments required for the kind of massive, agro-industrialisation programme which is a prerequisite for attaining international competitiveness and export-led growth. To obtain this, productivity must be improved through a highly-skilled labour force, dynamic entrepreneurial skills and the introduction and application of new and appropriate technologies.

Constraints, such as infrastructure bottlenecks and energy shortages, also must be overcome to revitalise business activities. To ensure economic growth, it will be necessary to adopt a determined and innovative family planning programme; intervene to reduce poverty; and take further action to preserve natural resources and improve the quality of the environment.

The major strategies that will be pursued by the Government (as articulated in the *Medium-Term Philippine National Development Plan*, 1993-98) aim to improve the quality of life through (a) human development which will ensure human capital formation through investing in health, education, and upgrading skills and technical capacity; and (b) international competitiveness which will provide the material foundation for sustained economic growth.

These twin strategies are inextricably linked. Together, they are expected to lead to increased productivity and output; enhanced technological capability; rising income and employment; increased savings and investments; the development of efficient and competitive domestic industries; and an expanded export base.

Crucial to achieving the goal of improved quality of life is the national capability to implement and manage the country's economic transformation. This will require strengthening Government's institutional capability to plan, implement and manage development programmes and projects whose focus is human development and international competitiveness.

Within the context of decentralisation, streamlining the administrative machinery, promoting local autonomy and reinforcing Government collaboration with the private sector and NGOs are all essential ingredients for the economic transformation of the Philippines.

MAJOR REFORMS IN 1991.

- The "Local Government Code" extends more power to Local Government Units (LGUs) on local investment and political decisions. It further expands the revenue base for LGUs from 11 to 40 percent, by 1995.
- The National Economic and Development Authority (NEDA) approves guidelines on private-sector access to ODA for priority technical assistance projects within the Medium Term Public Investment Plan and/or for Build-Operate-Transfer schemes.
- The newly passed Foreign Investment Act increases the maximum allowable equity participation of foreign investors, reduces administrative procedures and establishes more transparent guidelines.
- Executive Order (EO) 470 further rationalizes and simplifies the tariff structure to give the export sector easier access to lower-priced and better quality inputs.
- Central Bank Circular 1279 liberalized with immediate effect 139 trade items under List 13 of the Second Release of the Import Liberalization Programme.

PART TWO: DEVELOPMENT ASSISTANCE TRENDS

PART TWO: DEVELOPMENT ASSISTANCE TRENDS

A: TRENDS IN AID FLOWS

1. General Observations on Sources and Methodology

- The DCR contains Official Development Assistance flow information on a calendar year basis. Whenever differences occur in the fiscal year employed by a donor and that used in the DCR, the data have been proportionally distributed to ensure comparability. However, this may not give a completely accurate picture of actual disbursements in calendar year 1991.

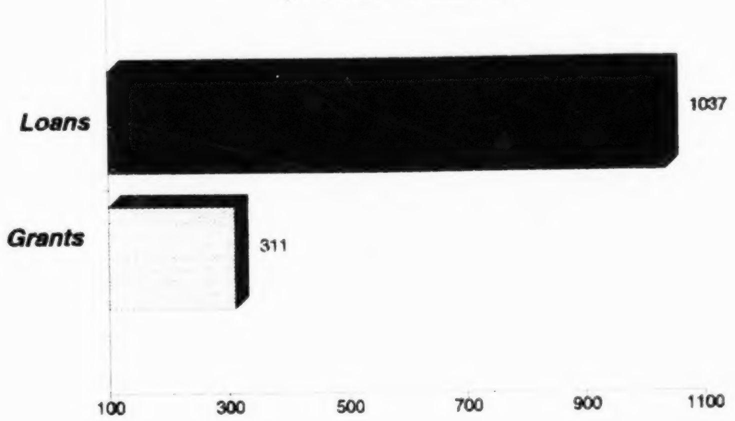
- Information was received from most donors, but was incomplete at times. Further, the definition of types of aid (e.g "Capital" and "Technical") may sometimes have been interpreted and recorded differently by different donors.

- The exchange rates used are a weighted average of the official United Nations monthly exchange rate for the year. All figures have been rounded up to the nearest thousand dollars.

- Close consultations with Government Authorities and Donors Agencies were undertaken during all phases of completing and validating the data to ensure the maximum possible consistency.

2. Overview of Total Recorded Assistance in 1991

Figure 2.1
External Assistance by Terms, 1991
(In US Million Dollars)



Disbursements of Official Development Assistance (ODA) to the Philippines decreased by US$ 400 million from--US$ 1.8 billion (in 1990) to US$ 1.4 billion (in 1991). Of this 1.4 billion, 77 percent (US$ 1.09 billion) was in the form of loans and the remaining 23 percent (US$ 0.31 billion) was grant assistance.

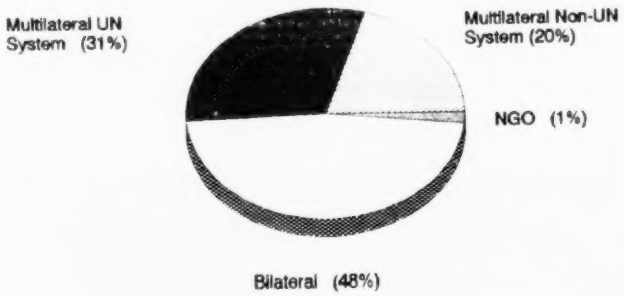
Investment project assistance and balance-of-payments support composed the largest loan component for the third year running. As in previous years, these loans were provided mainly by the World Bank (49.9 percent), the AsDB (28.4 percent) and Japan (17. 4 percent).

In 1991, Emergency Relief Assistance and Food Aid related to the several major natural disasters (earthquakes, floods, typhoons and volcanic eruptions) which struck the country in 1989, 1990 and again in 1991) continued to be dispersed. The assistance amounted to US$ 48.6 million. This figure is expected to rise in 1992 as pledged assistance is committed and then disbursed.

Grant assistance was mainly provided as technical assistance projects for capacity building and pre-investment studies. However, the technical assistance share of total assistance was reduced from 44.2 to 25.8 percent, mainly as a result of the drop in actual disbursements for committed projects and, following recent pledges, the relatively slow project identification process.

Figure 2.2

External Assistance by Donor Group, 1991
(In US Million Dollars)

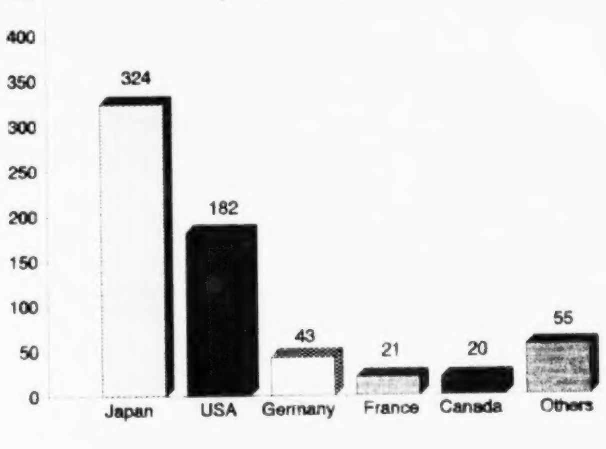


Bilateral donors provided the Philippines with a total of US$ 645 million (47.5 percent of the total)--a decrease from 1990 disbursements by US$ 240 million. Multilateral assistance amounted to US$ 692 million.

Among bilateral aid sources, Japan continued to be the largest donor with an aid programme of US$ 324 million supporting mainly transport, communication, agriculture, natural resources and energy. The United States retained its position as the second largest bilateral donor with its contribution at US$ 182 million. Germany (US$ 42.6 million), France (US$ 20.7 million) and Canada (US$ 19.9 million) completed the "top five" bilateral donor group. Together these five countries accounted for 91.4 percent of the total bilateral programme. Italy, the Netherlands, the Republic of Korea, Sweden and Norway together contributed another US$ 41.75 million.

Among the multilateral donors, the World Bank, IDA and AsDB accounted for 92.8 percent of all assistance, a slight decrease from their share of 95.8 percent in 1990. Individually IBRD and AsDB were the largest and third largest donors, respectively. World Bank investment project assistance went mainly to industry, energy and natural resources, including agriculture while AsDB assistance was distributed to agriculture, forestry and fisheries, energy, transport, social and human resources development, and industry. UNICEF, UNFPA and UNDP provided a total of US$ 18.8 as free-standing technical assistance. The World Food Programme concentrated the largest part of its assistance in the emergency and relief assistance area.

Figure 2.3
Major Bilateral Donors, 1991
(In US Million Dollars)

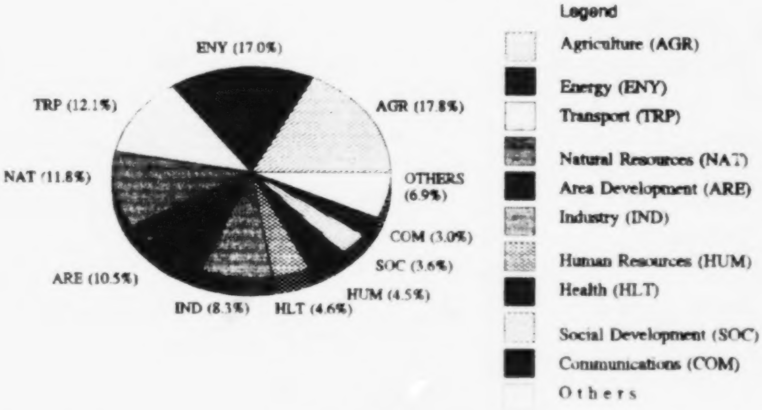


Non-governmental organisations (NGOs) based abroad contributed US$ 19.3 million, a little less than two percent of the total ODA. Major NGOs were CARE, IDRC, the Ford Foundation and the Asia Foundation.

3. Sectoral Distribution of External Assistance.

Significant changes cannot be expected when ODA sectoral data are considered over a short time span. However, physical infrastructure projects, agriculture, natural resources and the human and social sectors all increased their share of total assistance in 1991. A major change from 1990 was the fallout from the economic management sector--from 15.8 percent down to 2.2 percent--due to completion of an IBRD economic recovery loan package of US$ 300 million.

Figure 2.4
Sectoral Distribution of ODA, 1991



B: AID CO-ORDINATION

1. Introduction

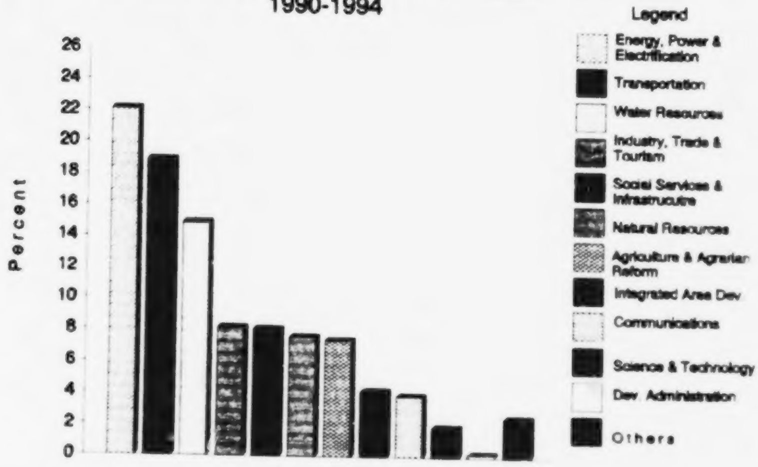
The Medium-term Philippine Development Plan, 1987-1992 was updated in 1990 to adjust the growth targets and the Government's investment programme to the effects on development of the events of 1989 and 1990.

The Plan's overriding goals continued to be sustainable economic growth, the promotion of equity, the alleviation of poverty and the generation of productive employment. Also updated were the corresponding sectoral investment programmes.

The main development strategies continued to focus on the Agro-Industrial Development Programme, the Comprehensive Agrarian Reform Programme, Poverty Alleviation, Decentralisation and Environmental Management.

The decision-making structure for Official Development Assistance is shared by two government bodies: the Coordinating Council for the Philippine Assistance Programme (CCPAP) and the National Economic and Development Agency (NEDA). As part of its Board, NEDA has the Committee on Official Development Assistance (CODA) and the Investment Coordinating Committee (ICC).

Figure 2.5
Medium Term Public Investment Program
1990-1994



The CCPAP serves as the advisory body to the NEDA Board by functioning as secretariat for ODA pledging sessions and by bringing to the Board's attention any policy issue or operational gap in the ODA management process. The CCPAP is also responsible for gathering political consensus relating to ODA matters.

The CODA monitors, coordinates and facilitates project implementation with the executive branches of government while the ICC approves projects based on submissions by the NEDA Secretariat which is responsible for (a) the programming and commitment of pledged ODA resources, and (b) operational inter-phasing with donors regarding country programming.

2. Initiatives in Aid Co-ordination

The Government has consistently sought to integrate assistance from external donors with its development strategies by convening pledging sessions for the Philippines Assistance Programme (PAP). The 1989 pledging session resulted in pledges for US$ 2.870 of which 47.8 percent had been disbursed as of July 1992.

In 1991 total pledges amounted to US$ 3,255 million. Of these pledges, US$ 523 million were grants. As of July 1992 90.8 percent of these had been committed or covered by agreements and 24.7 percent had been disbursed. As earlier discussed, disbursements for 1991 as such went down from 83 to 72 percent of commitments, a fact which constituted one of the major problems in aid co-ordination during the year.

Figure 2.6
Disbursement of ODA - Loans, 1989-1991

There is no consistent, overall picture regarding delays in pipeline identification, project formulation or implementation on the side of the donor community. The Philippine Government has long recognised that implementation problems causing delayed disbursements include delays in the approval of local contracts, the delayed release of funds, the poor performance of contractors and inadequate project monitoring. Delays were also observed due to the need to obtain Right of Way Clearances and Environmental Compliance Certificates. In general, these delays could be attributed to insufficient project preparation.

In 1991, to facilitate contract awards, the Government standardised procedures for the hiring of consultants and extended greater approval authority to the regional and local levels. A monitoring scheme for loan projects was also adopted whereby a project's status could be tracked on a monthly basis and the involved authorities could be alerted to implementation bottlenecks. In addition, to initiate dialogue and co-ordination between the involved institutions, a watch-list of projects was established in 1991 which identified and listed projects with serious implementation problems.

In 1991, another specific factor for low disbursements was the delayed release of Government counterpart funding for capital outlays. The General Appropriations Act was approved only in late June. Thus, to ensure adequate counterpart funding for future development projects, the Government took two important initiatives: (1) private-sector participation in the financing, construction, operation and maintenance of infrastructure projects institutionalized through Build-Operate-Transfer and similar schemes; and (2) the private sector/NGOs, and local government units were allowed direct access to ODA-financed, technical assistance projects under certain conditions.

During the 1991 meeting of the Consultative Group for the Philippines in Hong Kong, the Government announced a two-track approach to ensure that donor funds were committed at a rate which would maximize their use. First, a short-term programme will be developed to move firm pipeline projects to the implementation stage. Second, a medium-term programme of sectoral prototype activities which provides adequate lead time for project development will be developed to formulate these prototypes into specific projects.

In 1991, of particular significance in aid co-ordination between the Government and the Donor Community was the convening of efforts related to Relief and Rehabilitation from the effects of the Mount Pinatubo eruption. Total ODA assistance pledged to these efforts amounted to US$ 312 million as of December 31, 1991.

A number of initiatives continued at the programming level related to issues of both global and national concern. These included donor and Government co-ordination on the Global Environment Facility, the Montreal Protocol for protection of the ozone layer, the Education for All global programme and preparation for the United Nations Conference on Environment and Development (UNCED) in 1992.
